THREE-DIMENSIONAL SHAPES

A THREE-DIMENSIONAL SHAPES

Definition Solid Geometry —

Solid geometry studies three-dimensional shapes, such as cubes, cylinders, and spheres. The diagrams show examples of these shapes.

Definition Surface —

A surface is the exterior of a three-dimensional shape.

Definition Face -

A face is a flat surface of a three-dimensional shape.

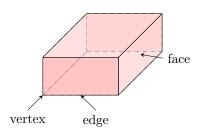

Definition Edge _____

An edge is a line segment where two faces meet.

Definition Vertex -

A **vertex** is a point where two or more edges meet.

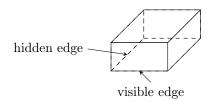

Ex:

B DRAWING THREE-DIMENSIONAL SHAPES

Method Drawing 3D Shapes -

When drawing 3D shapes, some edges are hidden because they are at the back of the shape. We call these **hidden** edges. To show the shape clearly, we use dotted lines for hidden edges. This helps us see the shape and its depth.

C CLASSIFICATION

Definition Classification -

Name	Shape	Faces	Edges	Vertices
Cube		6 (flat)	12	8
Sphere		1 (curved)	0	0
Square Pyramid		5 (flat)	8	5
Cylinder		3 (2 curved, 1 flat)	0	0
