

LENGTHS

A COMPARING LENGTHS

Method Line Up to Compare Lengths

To compare the length of two objects, line them up side by side. The object that looks taller is the longer one.

Ex:

The girl is taller than the boy.

B MEASURING LENGTHS

Method Measuring Length

To measure the length of an object, use small things like blocks or erasers. Line them up next to the object and count how many fit along its length.

Ex:

The cucumber measures 4 erasers long.
